1. Safety information

1.1 Installation and commissioning

- When laying wires, please ensure that no damage occurs to any of the constructional fire safety measures presented in the building.
- The controller must not be installed in rooms where easily inflammable gas mixtures are present or may occur.
- The permissible environmental conditions can’t be exceeded at the site of installation.
- Before connecting the device, make sure that the energy supply matches the specifications that the controller requires.
- All devices connected to the controller must be conformed to the technical specifications of the controller.
- All operations on an open controller are only to be conducted cleared from the power supply. All safety regulations for working on the power supply are valid.
- Connecting and/or all operations that require opening the collector (e.g. changing the fuse) are only conducted by specialists.

1.2 About this manual

This manual describes the mounting, functions and operation of a solar controller used for a solar hot water system, for mounting of other devices of a completed solar hot water system like solar collector, pump station and storage, please is sure to observe the appropriate installation instructions provided by each manufacturer. Mounting, wire connecting, commissioning and maintenance of this controller may only be performed by the trained professional person; the professional person should be familiar with this manual and follow the instructions contained herein.

1.3 Liability waiver

The manufacturer can’t monitor the compliance with these instructions or the circumstances and methods used for installation, operation, utilization and maintenance of this controller. Improper installation can cause damages to material and person. This is the reason why we do not take over the responsibility and liability for losses, damages or cost that might arise due to improper installation, operation or wrong utilization and maintenance or that occurs in some connection with the aforementioned. Moreover we do not take over liability for patent infringements or infringements – occurring in connection with the use of this controller on the third parties rights. The manufacturer preserves the right to put changes to product, technical data or installation and operation instructions without prior notice. As soon as it becomes
evident that safe operation is no longer possible (e.g. visible damage). Please immediate take the device out of operation. Note: ensure that the device can’t be accidentally placed into operation.

1.4 Important information
We have carefully checked the text and pictures of this manual and provided the best of our knowledge and ideas, however inevitable errors maybe exist. Please note that we cannot guarantee that this manual is given in the integrity of image and text, incorrect, incomplete and erroneous information and the resulting damage we do not take responsibility.

1.5 Signal description

Safety indication: Safety indications in the text are marked with a warning triangle. They indicate measures which can lead to injury of person or safety risks.

► Operation steps: small triangle “►” is used to indicate operation step.

Note: Contains important information about operation or functions.

1.6 Button and HMI description

Controller is operated with the 6 buttons on the right side of the screen

- “holiday button
- “M.H” button: manual heating
- “SET” button: confirm / selection
- “▲” up button: increase the value
- “▼” down button: reduce the value
- “ESC” button return/ exit: return to previous menu

### 2. Overview

#### 2.1 Technical data

- **Inputs:**
  - 1 * PT1000 temperature sensor input
  - 4 * NTC10K, B=3950 temperature sensor input
  - 1 * FRT rotary vane type electronic flow meter

- **Outputs:**
  - 2* Electromagnetic relay(R2/R3), maximum current 2A
  - 1* Semiconductor relay(R1), maximum current 1A
  - 1* Electromagnetic relay(HR), maximum current 10A

**Note:**
- a).110VAC main supply: max.power 750W
- b).230VAC main supply: max.power 1500W
- 1 * PWM variable frequency output (on/off switchable, 0-10V)

- **Functions:** operating hours counter, tube collector function, thermostat function, pump speed control, external heat exchange, adjustable system parameters and optional functions (menu-driven), balance and diagnostics

- **Power supply:** 100…240V ~(50…60Hz)
- **Rated impulse voltage:** 2.5KV
- **Housing:** Plastic ABS
- **Mounting:** Wall mounting
- **Operation:** 6 push buttons at the front cover
- **Protection type:** IP41
Ambient temperature: 0 ... 40 °C
Dimensions: 187*128*46mm

Note: there are 4 inputs for NTC10K, B=3950 temperature sensor, but only 2 sensors are included in standard delivery list, the other two should be purchased separately by customer if necessary.

2.2 Delivery list

- 1 * SR258 controller
- 1 * Accessory bag
- 1 * User manual
- 1 * PT1000 temperature sensor (φ6*50mm, cable length 1.5meter)
- 2 * NTC10K temperature sensor (φ6*50mm, cable length 3meter)

3. Installation

Note: The unit must only be located in the dry interior rooms. Please separate routing of sensor wires and mains wires. Make sure the controller as well as the system is not exposed to strong electromagnetic fields.

3.1 Mounting controller

Follow the below steps to mount the controller on the wall.

- Unscrew the crosshead screw from the cover and remove it along with the cover from the housing.
- Mark the upper fastening point ① on the wall. Drill and fasten the enclosed wall plug and screw leaving the head protruding.
- Hang the housing from the upper fastening point and mark the lower fastening points ②.
- Drill and insert lower wall plugs.
- Fasten the housing to the wall with the lower fastening screw and tighten.
- Carry out the electrical wiring in accordance with the terminal allocation.
- Put the cover on the housing. Attach with the fastening screw.

3.2 Wiring connection

According to the way of installation, wire can be connected from hole A on the bottom plate or from hole B, using a suitable tool (like knife) to cut the plastic of A.
3.3 Terminal connection

**Note:** before opening the housing! Always disconnect the controller from power supply and obey the local electrical supply regulation.

- **Input ports**
  - T1: PT1000 temperature sensor, for measuring the temperature of collector and thermal energy calculation.
  - T2 ~T5: NTC10K, B=3950 temperature sensor, for measuring temperature of tank and pipe.
  - PWM: Signal ports for high efficiency pump, detailed connection see below
  - FRT: For rotary vane type electronic flowmeter

- **Advice regarding the installation of temperature sensors:**
  - Only original factory equipped Pt1000 temperature sensors are approved for using with the controller, it is equipped with 1.5m silicon cable and suitable for all weather conditions, the cable is temperature resistant up to 280°C, connect the temperature sensors to the corresponding terminals with either polarity.
  - Only original factory equipped NTC10K,B=3950 temperature sensors are approved for using with tank and pipe, it is equipped with 3m PVC cable, and the cable is temperature resistant up to 105°C, connect the temperature sensors to the corresponding terminals with either polarity.
All sensor cables carry low voltage, and to avoid inductive effects, must not be laid close to 230 volt or 400 volt cables (minimum separation of 100mm).

If external inductive effects are existed, e.g. from heavy current cables, overhead train cables, transformer substations, radio and television devices, amateur radio stations, microwave devices etc., then the cables to the sensors must be adequately shielded.

Sensor cables may be extended to a maximum length of ca. 100 meter, when cable’s length is up to 50m, and then 0.75mm\(^2\) cable should be used. When cable’s length is up to 100m, and then 1.5mm\(^2\) cables should be used.

**Output ports**

- **FU1**: 2A/250V fuse
- Input Ports L, N: for power connection, L: live wire, N: zero wire, protective wire
- Output R1: Semiconductor relays (SCR), designed for pump speed control, Max. Current: 1A
- Output R2: Electromagnetic relays, designed for on/off control of pump or 3-ways electromagnetic valve, Max. Current: 1A
- Output R3: Electromagnetic relays, designed for on/off control of pump or 3-ways electromagnetic valve, Max. Current: 2A
- Output HR: Electromagnetic relays, designed for on/off control of after heating/thermostat function, Max. Current: 10A

### 3.4 Connection with high efficiency pump

Connecting the signal wire from the high-efficiency pump
Signal wire 1 from the high-efficiency pump is connected to GND port of controller

Signal wire 2 from the high-efficiency pump is connected to PWM port of controller

Signal wire 3 from the high-efficiency pump is not connected to the controller

Some pumps connections are available as above, for example:

Wilo Yonos PARA ST15/7.0 PWM2 M
Grundfos UPM3 SOLAR 15-75 130 CZA

Note:

1. High-efficiency pump with 0-10V signal only has 2 signal wires, connected to the corresponding port GND, PWM1 of controller.

2. Blue wire not always represent for “GND” and brown wire not always represent for “PWM”.

   "PWM" from pump must be match for “PWM” from controller.

   "GND" from pump must be match for “GND” from controller.
4. System description (Standard solar system with 1 tank, 1 collector field)

Description:
The controller calculates the temperature difference between collector sensor T1 and tank sensor T2. If the difference is larger than or identical to the adjusted switch-on temperature difference, the solar circulation pump (R1) will be switched on and the tank will be loaded until the switch-off temperature difference or the maximum tank temperature is reached.

<table>
<thead>
<tr>

</tbody>
</table>

Note:
Sometime, for one selected function, it needs an extra input to connect temperature sensor or an extra output to control pump or electromagnetic valve, in the case all inputs and outputs are in using, and then this selected function will not be triggered even when you have activated it. Controller can distinguish it automatically and switch-off this function.

1. When one of these functions (TIME, AH) is activated, and then the other one will be deactivated automatically.
2. After CIRC function is activated, if OHDP function is activated also and R2 output is selected for it, and then CIRC will be deactivated automatically.
5. Function’s parameters and options

5.1 Overview of menu structure

5.2 Menu operation description

- Access main menu
  - Press “SET” button to access main menu
  - Press “▲/▼” to select menu
  - Press “SET” button to enter the submenu

- Access submenu
  - After selecting main menu, then press “SET” button to access submenu
Press “▲/▼” button to select submenu,
Press “SET” button to enter the value adjust interface or selection function (select ON/OFF)
Press “▲/▼” to adjust value
Press “SET” or “ESC” to confirm the value you set
Press “ESC” to exit the submenu

Note: Enter the menu adjustment interface, if you don’t press any button in 3 minutes, screen will exit the adjustment and return to the main interface.

5.3 Value checking
At the normal operation mode, press “▲/▼” button, you can view the temperature of collector and tank, pump speed(n1%), flow rate(L/M), countdown time of disinfection function, auxiliary function. The controller operation time(DAYS), and firmware version(SW).

Note:
1. For the countdown time of disinfection, auxiliary function, you can only check them when the function is activated in the parameter menus.
2. At the value check interface, if you don’t press any button within 3 minutes, screen will exit the check interface and return to the main interface.

6. Functions operation and parameters setting (for user)

6.1 CLK Time setup

**Menu structure**

<table>
<thead>
<tr>
<th>CLK (Main menu)</th>
<th>Submenu</th>
</tr>
</thead>
<tbody>
<tr>
<td>00:00</td>
<td></td>
</tr>
</tbody>
</table>

Press “SET” button, select CLK menu
Press “SET” button, hour “00” blinks on the display.
Press “▲/▼” button to adjust hour
Press “SET” button, minute time “00” blinks on the display
Press “▲/▼” button to adjust minute
Press “SET” or “ESC” button to save the set value
**Note:** In the case power to controller is switched-off, date and time will be remembered in controller for 36 hours.

### 6.2 THET Timing heating

Electrical back-up heater can be installed in the solar system to ensure the tank’s temperature meets the required temperature, this electrical heater can be controlled automatically by this controller, when tank temperature $T_2$ drops below the switch-on set point of this function, electrical heater HR is triggered to heat tank up to the switch-off temperature, and then electrical heater HR stops working.

**Note:** the reference sensor $T_3$ or $T_2$ of this function can be selected in parameter THTS.

It is possible to set three time sections for activating this function,

**Factory default set:**
- The first time section: heating starts at 4:00am, stops at 5:00am, and switch on temperature is set at $40^\circ C$, switch-off temperature is set at $50^\circ C$
- The second time section: heating starts at 10:00am, stops at 10:00am
- The third time section: heating starts at 17:00am, stops at 22:00am, and switch on temperature is set at $50^\circ C$, switch-off temperature is set at $55^\circ C$

If you want to shut off one timing heating, then you can set the turning on time and turning off time with a same value (for example, set second start time $tA2\ O$ at 10:00 and set the stop time $tA2\ F$ at 10:00)

Every day three timing heating can be set, and the switch-on temperature adjustable range is $0^\circ C \sim (OFF-2^\circ C)$, switch-off temperature adjustable range is $(ON+2^\circ C) \sim 95^\circ C$.

- **Intelligent heating mode**
  
  In the case the solar irradiation isn’t enough to heat the tank, in order to ensure the tank temperature meets the requirement, controller will check the temperature of tank at the specified time, if temperature doesn’t rise to the required value, and controller will trigger the electrical heater to heat tank until its temperature rises up to the default switch-off temperature.

  **Default set (not adjustable):**
  
  The first time: starts heating at 13:00 until temperature of $30^\circ C$.
  The second time: starts heating at 14:00 until temperature of $35^\circ C$. 
The third time: starts heating at 15:00 until temperature of 40 °C.
The forth time: starts heating at 16:00 until temperature of 45 °C.
The fifth time: starts heating at 17:00 until temperature of 50 °C.

**Note:** If customer use electrical heater as back-up, please according to the power of electrical heater to equip corresponding safety devices like contactor and breaker with this controller, we strongly recommend equipping with SR802 device with this controller, (SR802 detailed technical data see item 10 Accessories)

---

</table>
Function setting:
► Press “SET” button to access main menu, and press “▲” to select THEH timing heating main menu.
► Press “SET” button to set parameter, select the reference sensor of tank, “THS S2” displays on the screen.
► Press “SET” button, “S2” blinks
► Press “▲/▼” button to select desired sensor (S3 for T3, S2 for T2)
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button, to access intelligent heating mode, “SMT OFF” displays on the screen
► Press “SET” button, “OFF” blinks
► Press “▲/▼” button to activate this function.
► Press “▲” button to set start time of the first time section, “tH1O 04:00” displays on the screen
► Press “SET” button, hour time “04” blinks
► Press “▲/▼” button to adjust hour of the switch-on time
► Press “SET” button, minute time “00” blinks
► Press “▲/▼” button to adjust minute of the switch-on time
► Press “SET” button, to set the switch on temperature, “40°C” blinks
► Press “▲/▼” button to adjust the switch-on temperature.
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button to set stop time of the first time section, “tH1F 05:00” displays on the screen
► Press “SET” button, hour time “05” blinks
► Press “▲/▼” button to adjust hour of the switch-off time
► Press “SET” button, minute time “00” blinks
► Press “▲/▼” button to adjust minute of the switch-off time
► Press “SET” button, to set the switch off temperature, “45°C” blinks
► Press “▲/▼” button to adjust the switch-off temperature.
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button to access the window of the switch-on time of the second time section, repeat above steps to set time and temperature for the second and third time section.

When heating sign 🚨🚨🚨 blinks on the screen, it indicates that timing-heating function is activated.
Note:
The Sign  📜  represents whether timing heating function is on or off.
1. Within the preset time section, heating sign  📜  is lighted on the screen
2. Out of the preset time section, heating sign  📜  doesn’t display on the screen.

6.3 CIRC DHW circulation pump controlled by temperature or by time

Function description:
This controller provides an output for running DHW circulation pump, which can be controlled by a temperature, at this case, an extra circuit pump (connect to the output R2 option) and an extra temperature sensor installed on the hot water return pipe (connect to the input T4) should be installed in the system. When the temperature of DHW return is lower than the preset switch-on temperature, circuit pump is triggered, until temperature rises up to the switch-off temperature, pump is stopped.

2 controlling modes are designed for running DHW circulation pump.

- Time controlled DHW pump within the preset 3 time sections (default Mode)
Within the preset time section, when running of the DHW circulation pump R2 is controlled by time, at this case, pump is triggered by time, as default set, pump R2 runs for 3 minutes (adjustable range 1-30 minutes) and then ceases for 15 minutes (adjustable range 0-60 minutes), same process repeated within the preset time section.

Note: if the ceased time (CYCF) is set to 0 minute, it means within this time section, circuit pump keeps running without any stop.
Default time section setup:
The first time section: start at 05:00, stop at 7:00
The second time section: start at 11:00, stop at 13:00
The third time section: start at 17:00, stop at 22:00

- Temperature controlled DHW pump within the preset 3 time sections
within the preset time section, when running of the DHW circulation pump is controlled by temperature, as default set, pump R2 is triggered when return temperature T4 is below 40°C, and it is stopped when T4 rises up to 45°C, There is a precondition for triggering the DHW circuit pump (set in submenu STAT):
START ON: tank’s temperature sensor (T3 as priority selection) is 2°C higher than the preset switch-off temperature, and then DHW circuit pump can be triggered.

**Note:** two Modes can’t play at the same time, when time controlled Mode is selected, then temperature controlled Mode can’t be activated.

Default time section setup:
The first time section: start at 05:00, stop at 7:00
The second time section: start at 11:00, stop at 13:00
The first time section: start at 17:00, stop at 22:00
If it is needed to close one time section, just set the start time and stop time at a same value (e.g. 10:00 starts, 10:00 stops)

**Note:**
1. Only one controlling Mode can be selected, either time control Mode or temperature control Mode.
2. If sensor T4 should be installed, in order to avoid measuring error, please ensure to install the sensor at 1.5m far to tank.
3. Both control Modes and temperature control mode, the parameter set steps are same.

Function setup: (take temperature controlled DHW as example)

► Select main menu CIRC DHW circuit function
► Press “SET” button, “TCYC” displays on the screen.
► Press “SET” again, “TCYC OFF” displays on the screen
► Press “SET”, “OFF” blinks
► Press “▲/▼” button, “ON” blinks, to activate this function
► Press “SET” or “ESC” button to save the setting
► Press “▲” button, “TEMP OFF” displays on the screen (temperature control Mode)
► Press “SET”, “OFF” blinks
► Press “▲/▼” button, “ON” blinks, to activate this function
► Press “SET” or “ESC” button to save the setting.

► Press “▲” button, “TIME ON” displays on the screen (time control Mode, default as on)
► Press “SET”, “ON” blinks
► Press “▲/▼” button to deactivate this function
► Press “SET” or “ESC” button to save the setting.

► Press “▲” button, “STAT ON” displays on the screen (Switch-on condition under temperature control Mode, under time control Mode, no this function)
► Press “SET”, “ON” blinks (default as open)
► Press “▲/▼” button to deactivate this function
► Press “SET” or “ESC” button to save the setting.

► Press “▲” button, “CYCO 40°C” displays on the screen, set the switch-on temperature of DHW circuit (if select time control Mode, then “CYCO 03Min” displays, here take temperature mode as example)
► Press “SET”, “40°C” blinks
► Press “▲/▼” button to adjust the switch-on temperature (adjustable range 0°C ~ (OFF-2°C))
► Press “SET” or “ESC” button to save the setting.

► Press “▲” button, “CYCF 45°C” displays on the screen, set the switch-off temperature of DHW circuit
► Press “SET”, “45°C” blinks
► Press “▲/▼” button to adjust the switch-off temperature (adjustable range ON+2°C ~ 55°C)
► Press “SET” or “ESC” button to save the setting.

► Press “▲” to access 3 time sections setting, “tC1O 05:00” displays on the screen, set the start time of the first time section.
► Press “SET”, time hour “05” blinks,
► Press “▲/▼” to adjust hour of the circuit start time.
Press “SET”, time minute “00” blinks,
Press “▲/▼” to adjust minute of the circuit start time.
Press “SET” or “ESC” button to save the setting.

Press “▲” to access the stop time of the first time section, “tC1F 07:00” displays on the screen,
Press “SET”, time hour “07” blinks,
Press “▲/▼” to adjust hour of the circuit stop time.
Press “SET”, time minute “00” blinks,
Press “▲/▼” to adjust minute of the circuit stop time.
Press “SET” or “ESC” button to save the setting.
Press “▲” to access the start time of the second time section, repeat above step to set start and stop time for second and third time section.

If you want to close the DHW circuit within one time section, and then just set its start time and close time with a same value, for example, at the second time section, start time is set at 10:00, but close time is also set at 10:00.

7. Function operation and parameter setup (engineer)

7.1 PWD Password

Menu structure

Access main menu, select “PWD 0000” to enter password
Press “SET” button, the left digital blinks, enter password, factory set is “0000”
Press “▲/▼”, to enter the first digital
Press “SET”, the second digital blinks
Press “▲/▼” to enter the second digital
Press” SET”, the third digital blinks
Press”▲/▼” to enter the third digital
Press “SET”, the forth digital blinks
7.2 LOAD tank heating
Function description:
  - △T control logic
The controller works as a standard temperature differential controller. If the temperature reaches or exceeds the switch-on temperature difference (DTO), the pump R1 switches on. When the temperature difference reaches or falls below the adjusted switch-off temperature difference (DTF), the respective relay of R1 switches off.

Note: The switch-on temperature difference must be 0.5 K higher than the switch-off temperature difference. The set temperature difference must be at least 0.5 K higher than the switch-on temperature difference.

  - Speed control
If the temperature reaches or exceeds the switch-on temperature difference, the pump switches on at 100% speed for 10s. Then, the speed is reduced to the minimum pump speed value. If the temperature difference reaches the preset temperature difference, the pump speed increases by one step (10%). The response of the controller can be adapted via the parameter RIS. If the difference increases by the adjustable rise value RIS, the pump speed increases by 10% until the maximum pump speed of 100% is reached. If the temperature difference decreases by the adjustable rise value (RIS), pump speed will be decreased by one step 10% accordingly.

Note: To enable speed control function, the corresponding pump type has to be set to (MIN, MAX) and relay control has to be set to (PULS, PSOL, PHEA or 0-10 V) (under adjustment menu PUMP).

  - SMX Maximum tank temperature protection set
If the tank temperature reaches its adjusted maximum temperature, the tank will no longer be loaded in order to avoid damage caused by overheating. If the maximum tank temperature is
exceeded, sign ☀️ is displayed on the screen.

The sensor for tank maximum limitation (SMAX) can be selected. The maximum limitation always refers to the sensor selected (T2 or T3). The switch-on hysteresis (HYST) is selectable (Default is 2°C), for example, when tank maximum temperature is set to 70°C, then at 68°C, Maximum tank temperature protection function is deactivated automatically.

► Press “SET”, “70°C” blinks
► Press “▲/▼”, to adjust the maximum temperature of tank
► Press “SET” or “ESC” to save the setting
► Press “▲”, “SMAX S2” displays on the screen
► Press “SET”, “S2” blinks
► Press “▲/▼”, select the sensor for maximum temperature of tank (S3 for T3, S2 for T2)
► Press “SET” or “ESC” to save the setting
► Press “▲”, “HYST 2K” displays on the screen
► Press “SET”, “2K” blinks
► Press “▲/▼”, to adjust the hysteresis of tank maximum temperature
► Press “SET” or “ESC” to save the setting

7.3 COL Collector function

Function description

• OCEM Collector emergency shutdown
When the collector temperature exceeds the adjusted collector emergency temperature, then solar pump (R1) switches off in order to protect the system components against overheating (collector emergency shutdown). If the maximum collector temperature (OCEM) is exceeded, sign ☀️⚠️ is displayed.

⚠️ **Warning**! Risk of injury! Risk of system damage by pressure surge! If water is used as the heat transfer fluid in pressurized systems, water will boil at 100 °C. Then do not set the collector limit temperature higher than 95 °C.

- **OCCO Collector cooling**
  The collector cooling function keeps the collector temperature rising within the operating range by heating the tank. If the tank temperature reaches 95°C the function will be switched off for safety reasons.

When the tank temperature exceeds the adjusted maximum temperature of tank, then solar system is switched off. If the collector temperature rises up to its adjusted maximum collector temperature, the solar pump is switched on again until the collector temperature falls below the maximum collector temperature. The tank temperature may then exceed its maximum temperature, but only up to 95°C (emergency shutdown of the tank), and sign ⚠️ blinks on the screen, system stops. If the collector cooling is active, ☀️ blinks on the screen.

This function is only available when the system cooling function (OSYC) and the heat transfer function (OHDP) are not activated.

- **OCMI Collector minimum temperature**
  The minimum collector temperature is the lowest temperature for running the solar system, only when collector temperature is higher than this temperature, solar pump (R1) just can be switched-on, if the collector temperature falls below the adjusted minimum temperature, and the function will be activated, sign ☀️ blinks on the screen slowly.

- **OCFR Collector antifreeze function**
  Collector antifreeze function activates the loading circuit between the collector and the tank when the collector temperature falls below the adjusted temperature CFRO. This will protect the fluid against freezing or coagulating. If collector temperature exceeds the switch-off
If collector antifreeze function is activated, sign 🥶 blinks on the screen slowly.

**Note:** Since this function uses the limited heat which is saved in the tank, so the antifreeze function should be used in regions where ambient temperatures is around the freezing point only for a few days.

- **OTCO Tube collector function**

This function is used for improving the switch-on behavior in systems with non-ideal sensor positions (e.g. with some tube collectors).

This function operates within an adjusted time section. It activates the collector circuit pump R1 for an adjustable runtime between adjustable pauses in order to compensate for the delayed temperature measurement.

If the runtime is set to more than 10s, the pump will run at 100% for the first 10s of the runtime. For the remaining runtime, the pump will run at the adjusted minimum speed.

If the collector sensor is defective or the collector is blocked, this function will be switched off.

Function setting:

**OCEM (Collector emergency shutdown function) setup**
► Select “COL” function menu
► Press “SET”, “OCEM” displays on the screen
► Press “SET” again, “OCEM ON” displays on the screen
► Press “SET”, “ON” blinks on the screen
(If it is necessary to shut down this function, press “▲/▼” to deactivate it)
► Press “SET” or “ESC” to save the setting
► Press “▲”, “OCEM 130°C” displays on the screen
► Press “SET”, “130°C” blinks on the screen
► Press “▲/▼”, to activate or deactivate the collector emergency function
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to the previous menu

**OCCO (Collector cooling function) setup**
► Press “▲”, “OCCO” displays on the screen
► Press “SET”, “OCEM OFF” displays on the screen
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼”, to activate this function, “OCEM ON” displays on the screen
► Press “▲”, “CMAX 110°C” displays on the screen
► Press “▲/▼”, to adjust the switch-on temperature of collector cooling function
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to previous menu

**OCMI (Collector minimum temperature) setup**
► Press “▲”, “OCMI” displays on the screen
► Press “SET”, “OCMI OFF” displays on the screen
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼”, to activate this function, “OCMI ON” displays on the screen
► Press “▲”, “OCMI 10°C” displays on the screen
► Press “▲/▼”, to adjust the minimum temperature of collector
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to previous menu
OCFR (Antifreeze function) setup
► Press “▲”, “OCFR” displays on the screen
► Press “SET”, “OCFR OFF” displays on the screen
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼”, to activate this function, “OCFR ON” displays on the screen
► Press “▲”, “CFRO 4°C” displays on the screen
► Press “SET”, “4°C” blinks on the screen
► Press “▲/▼”, to adjust the switch-on temperature of antifreeze function
► Press “SET” or “ESC” to save the setting
► Press “▲”, “CFRF 5°C” displays on the screen
► Press “SET”, “5°C” blinks on the screen
► Press “▲/▼”, to adjust the switch-off temperature of antifreeze function
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to the previous menu

OTCO (Tube collector function) setup
► Press “▲”, “OTCO” displays on the screen
► Press “SET”, “OTCO OFF” displays on the screen
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼”, to activate this function, “OTCO ON” displays on the screen
► Press “▲”, “TCST 07:00” displays on the screen
► Press “SET”, “07” blinks
► Press “▲/▼”, to adjust hour
► Press “SET”, “00” blinks on the screen
► Press “▲/▼”, to adjust minute
► Press “SET” or “ESC” to save the setting
► Press “▲”, “TCEN 19:00” displays on the screen
► Press “SET”, “19” blinks
► Press “▲/▼” to adjust hour
► Press “SET”, “00” blinks
► Press “▲/▼”, to adjust minute
► Press “SET” or “ESC” to save the setting
► Press “▲”, “TCRU 30” displays on the screen
► Press “SET”, “30” blinks
► Press “▲/▼”, to adjust runtime
Press “SET” or “ESC” to save the setting
Press “▲”, “TCIN 30Min” displays on the screen
Press “SET”, “30” blinks
Press “▲/▼”, to adjust stop time
Press “SET” or “ESC” to save the setting
Press “ESC” to return to the previous menu

7.4 PUMP Pump R1 control mode

Function description:
With this parameter, the relay control mode can be adjusted. The following modes can be selected:

- Adjustment for standard pump without speed control:
  ONOF: Pump on / pump off
- Adjustment for standard pump with speed control:
  PULS: Burst control via semiconductor relay
- Adjustment for high-efficiency pump (HE pump)

• PSOL: PWM profile solar pump

• PHEA: PWM profile heating pump
• 0-10: Speed control via 0 - 10 V signal

**Note:**

1. More information about connection of high efficiency pump see the paragraph (3.5 Connection with high efficiency pump)
2. Minimum pump speed: Under the adjustment menu MIN1, a relative minimum speed for connected pumps can be allocated to the outputs R1.
3. Maximum pump speed: Under the adjustment menu MAX1, a relative maximum speed for connected pumps can be allocated to the outputs R1.
4. When the devices which are not speed-controlled are used (e.g. motored valves), the pump speed value of the corresponding relay must be set to 100 % or the control Mode must be set to ONOF in order to deactivate pump speed control.

Function setup
► Select “PUMP” menu
► Press “SET”, “ONOF ON” displays on the screen
► Press “▲/▼”, to select pump type “PLUS、PSOL、PHEA、0-10V”
► After select pump type, press “SET” to access the pump type.
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼” to open
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to previous menu

Note:
Only 1 type can be selected from 5 types ONOF、PLUS、PSOL、PHEA、0-10V
Example: when “PLUS ON” open option is selected, then other four types are closed automatically.

7.5 COOL Cooling function
Function description:
There are 3 cooling functions can be activated for 3 different devices: system cooling, tank cooling, heat transferring by external radiator.
- OSYC System cooling
The system cooling function aims to keep the lifetime of a solar system for a longer time. The
function overrides the maximum tank temperature limitation to provide thermal relief of the collector field and the heat transfer fluid on hot days. If the tank temperature is higher than the adjusted maximum tank temperature and the switch-on temperature difference DTCO is reached, the solar pump remains running or will be switched on. Solar loading is continued until either the temperature difference falls below the adjusted switch-off value DTCF or the collector emergency shutdown temperature OCEM is reached.

**Note:** This function will only be available when the collector cooling function, external radiator heat transfer functions are not activated.

- **OSTC Tank cooling**

  When the tank cooling function is activated, the controller aims to cool down the tank during the night in order to prepare it for solar loading on the following day. If the tank temperature exceeds the adjusted maximum tank temperature SMAX, the collector temperature falls below the tank temperature and down to the switch-on temperature difference DTCO of this cooling function, then system will be activated in order to cool down the tank by releasing the energy through the collector.

  If tank cooling function is activated, sign ☀️ blinks on the screen

  **Note:** if tank temperature reaches to 95 °C, all cooling functions will be locked. Hysteresis switch on temperature difference is 5K.

- **OHDP Heat transferring by external radiator**

  Heat transferring by external radiator function is designed to transfer the excess heat which is generated under the strong solar irradiation through an external heat exchanger (e. g. fan coil); the purpose is to keep the collector’s or tank’s temperature within the operating range.

  For this function, an extra output should be added (R2 or R3 as option)

  Heat transferring by external radiator function can control either an additional pump or a valve (OTP ON = pump logic, OTP OFF = valve logic)

  **Heat transferring by pump logic:**

  If the collector temperature reaches the switch on temperature (OTST), the heat transfer pump(R2/R3) on. If the collector temperature fall 5K below heat transfer temperature (OTST), the heat transfer pump (R2/R3) off.

  **Heat transferring by valve logic:**
If the collector temperature reaches the switch on temperature (OTST), the heat transfer valve (R2/R3) and circuit pump (R1) on. If the collector temperature fall 5K below heat transfer temperature (OTST), the heat transfer valve (R2/R3) and circuit pump (R1) off.

Below is the example of this application for reference.

![Collector heat transferring valve logic](image1)
![Collector heat transferring pump logic](image2)

Sign ![sign1] displays on the screen, it indicates that valve logic heat transferring is running.

Sign ![sign2] displays on the screen, it indicates that pump logic heat transferring is running.

**Note:**

1. When collector overheat temperature OTST is 10K below the CEM temperature of collector emergency shutdown, then collector overheat temperature OTST is locked.
2. Heat transferring function is only available when collector cooling function (OCCO) and system cooling function (OSYC) are deactivated.

**Function setting:**

**OSYC (system cooling function) setting**

► Select “COOL” main menu
► Press “SET” select submenu “OSYC”.
► Press “SET”, “OSYC OFF” displays on the screen
► Press “SET”, “OFF” blinks on the screen
► Press “▲/▼”, to activate this function
► Press “SET” or “ESC” to save the setting
OSTC (Tank cooling function) setting
► Press “▲” button, “OSTC” displays on the screen
► Press “SET”, “OSTC OFF” displays on the screen
► Press “SET” button, “OFF” blinks
► Press “▲/▼” to activate this function
► Press “▲”, “DTCO 20K” displays on the screen
► Press “SET”, “20K” blinks
► Press “▲/▼”, to adjust the switch on temperature difference
► Press “SET” or “ESC” to save the setting
► Press “▲”, “DTCF 15K” displays on the screen
► Press “▲/▼”, to adjust the switch-off temperature difference
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to previous menu

OHDP (Heat transferring) setting
► Press “▲”, “OHDP” displays on the screen
► Press “SET”, “OHDP OFF” displays on the screen
► Press “SET”, “OFF” blinks
► Press “▲/▼”, to activate this function, “OHDP ON” displays
► Press “▲”, “OTST 80°C” displays
► Press “SET”, “80°C” blinks
► Press “▲/▼”, to adjust the temperature of heat transferring
► Press “SET” or “ESC” to save the setting
► Press “▲” button, “OTPM ON” displays
► Press “SET”, “ON” blinks
► Press “▲/▼”, to select the control logic pump or valve
► Press “SET” or “ESC” to save the setting
► Press “▲”, “REL 3” displays
► Press “SET”, “3” blinks
► Press “▲/▼”, to select the output port for heat transferring
► Press “SET” or “ESC” to save the setting
► Press “ESC” to return to previous menu

7.6 AUX Auxiliary function

Function description:
Auxiliary functions can be set under “AUX” menu; controller can activate several auxiliary functions simultaneously.

- **TIME Timer function**
  Through function, the output relays can be triggered at a specified time, for this purpose, an output R3 should be added.

- **AH Thermostat function**
  Thermostat function is independent from solar system, through output R3, it is possible to transfer the thermal energy from tank to radiator to reduce the tank temperature, or increase the tank temperature by other heat source, every day three time section can be set.

  **Note:**
  - AHO< AHF: thermostat function is used to control the back-up heater.
  - AHO> AHF: thermostat function is used to transfer heat from tank to reduce tank temperature.
  - Sign AH displays on the screen, it indicates thermostat function is activated.
  - Sign AH displays on the screen, it indicates thermostat function is running.

- **BEEP Beeper fault warning**
  When system has fault (temperature sensor fault, no flow), beeper sends out warning.

Function setup

- **TIME Timer function**
  - Select AUX main menu, press “SET” to access “TIME” submenu
  - Press “SET”, “TIME OFF” displays
  - Press “SET”, “OFF” blinks
  - Press “▲/▼”, to activate this function, “TIME ON” displays
  - Press “SET” or “ESC” to save the setting
  - Press “▲”, “t1O 00:00” displays on the screen
  - Press “SET”, hour “00” blinks
  - Press “▲/▼”, to adjust the hour of start time of the first time section
  - Press “SET”, minute “00” blinks
  - Press “▲/▼”, to adjust the minute of start time of the first time section
  - Press “SET” or “ESC” to save the setting
  - Press “▲”, “t1F 00:00” displays on the screen
  - Press “SET”, hour “00” blinks
  - Press “▲/▼”, to adjust the hour of close time of the first time section
  - Press “SET”, minute “00” blinks
  - Press “▲/▼”, to adjust the minute of close time of the first time section
  - Press “SET” or “ESC” to save the setting
  - Press “▲”, to access the second time section setting, same like above steps to set the second, the third time section.

If one of time section needs to be closed, then just set the start time and close time with a same value. (Example: 10:00 start, 10:00 close also)

**AH Thermostat function**

- Select AH submenu, “AH” displays on the screen
- Press “SET”, “AH OFF” displays
- Press “SET”, “OFF” blinks
- Press “▲/▼”, to activate this function, “AH ON” displays
- Press “SET” or “ESC” to save the setting
- Press “▲”, “AHS S3” displays on the screen
- Press “SET”, “S3” blinks
- Press “▲/▼”, to select the reference sensor
- Press “SET” or “ESC” to save the setting
Press “▲”, “AH0 40°C” displays on the screen
Press “SET”, “40°C” blinks
Press “▲/▼”, to adjust the switch-on temperature
Press “SET” or “ESC” to save the setting
Press “▲”, “AHF 45°C” displays on the screen
Press “SET”, “45°C” blinks
Press “▲/▼”, to adjust the switch-off temperature
Press “SET” or “ESC” to save the setting
Press “▲”, “tA1O 00:00” displays on the screen
Press “SET”, hour “00” blinks
Press “▲/▼”, to adjust the hour of start time of the first time section
Press “SET”, minute “00” blinks
Press “▲/▼”, to adjust the minute of start time of the first time section
Press “SET” or “ESC” to save the setting
Press “▲”, “tA1F 23:59” displays on the screen
Press “SET”, hour “23” blinks
Press “▲/▼”, to adjust the hour of close time of the first time section
Press “SET”, minute “59” blinks
Press “▲/▼”, to adjust the minute of close time of the first time section
Press “SET” or “ESC” to save the setting
Press “▲”, to access the second time section setting, same like above steps to set the second, the third time section.
If you want cease the thermostat function within a time section, then just set its start time and close time with a same value. (Example: 10:00 start, 10:00 close also)

**BEEP (Beeper warning function) setting**

Press “▲”, select BEEP submenu, “BEEP” displays on the screen
Press “SET”, “BEEP OFF” displays on the screen
Press “SET”, “OFF” blinks
Press “▲/▼”, to activate this function, “BEEP ON” displays on the screen
Press “SET” or “ESC” to save the setting

**7.7 MAN Manual operation**

For control and service work, the operating mode of the relays can be manually adjusted. For this purpose, select the adjustment menu MAN (for R1, R2, R3, HR) to set output “On/OFF”
Manually.

**Note:** When manual mode is activated, sign (_manual) blinks on the screen, controller runs for 15 minutes and then switch-off all output, control exits manual mode automatically.

### Function setup
- Press “▲”, “R1” displays on the screen
- Press “SET”, “R1 OFF” displays
- Press “SET”, “OFF” blinks
- Press “▲/▼”, to activate this function, “R1 ON” displays
- Press “SET” or “ESC” to save the setting
- Press “▲”, “R2” displays, repeat above steps to set the manual output of R2, R2, HR.

### 7.8 BLPR Blocking protection

**Function description:**
In order to protect the pumps against blocking after standstill, the controller is equipped with a blocking protection function. This function switches on the relays one after another every day at 12:00 a.m and pump runs for 10s at 100 % speed.
Function setting
► Select main menu BLPR (blocking protection), “BLPR” displays on the screen
► Press “SET”, “BLPR OFF” displays
► Press “SET”, “OFF” blinks
► Press “▲/▼”, to activate this function, “BLPR ON” displays on the screen
► Press “SET” or “ESC” to save the setting

7.9 OTDI Thermal Disinfection function

Function description:
This function helps to prevent the spread of Legionella in DHW tanks by systematically activating the after-heating.

For thermal disinfection, the temperature at the allocated sensor has to be monitored. During the monitoring period PDIS, this protection ensures the disinfection temperature is continuously exceeded the disinfection temperature TDIS for the entire disinfection period DDIS. Thermal disinfection can only be completed when the disinfection temperature is exceeded for the duration of the disinfection period without any interruption. The monitoring period PDIS starts as soon as the temperature at the allocated sensor falls below the disinfection temperature TDIS, once the monitoring period PDIS ends, disinfection period SDIS starts, and the allocated reference relay activates the after-heating, when tank temperature exceeds the disinfection temperature, disinfection phase DDIS starts and disinfection heating time countdowns, countdown finishes, disinfection heating finishes.

► Press “SET”, “18” blinks
► Press “▲/▼”, to adjust the start time of the disinfection
► Press “SET” or “ESC” to save the setting

**7.10 FS Flow rate monitoring and pump dry running protection**

Function description:

In order to achieve this function, an extra digital flow meter FRT should be installed on the return pipe of solar system, when solar pump R1 is triggered, the flow rate of return pipe is monitored to ensure system runs normally.

If relay R1 is powered, if controller hasn’t got signal from digital flow meter within 30 seconds, then solar pump R1 will be stopped, error message will appear, and sign 🚨 ⚠️ will
blinks on the screen. By this function, it can avoid pump dry running.

**i Note:** reasons for no flow rate in system:
- No heat transfer liquid in system pipe due to pipe leakage.
- Under this menu, the flow monitoring function can be activated and deactivated.

If open option of the flow monitoring function is activated, and then the sign \( \text{знак} \) will display on the screen, when circuit pump R1 is running, at the checking status you can check the flow rate by press “▲/▼” button and check current flow rate L/M.

**i Note:** digital flow meter FRT is not included in the delivery list, it is needed to buy separately, see its specification in item 10.

<td></td>
</tr>
</tbody>
</table>

Submenu
Function setting

► Select UNIT menu
► Press “SET”, “TEMP °C” displays on the screen
► Press “SET”, “°C” blinks
► Press “▲/▼”, to select temperature unit
► Press “SET” or “ESC” to save the setting

7.12 RET Reset

RSTP (Menu parameters): through reset function, all parameters can be reset to factory setting

Menu structure

Function setting

► Select RST menu
► Press “SET”, “RSTP” displays on the screen
► Press “SET”, “YES” blinks
► Press “SET” for 3 seconds, beeper sounds “di” 3 times, “YES” lighting, and it indicates system is recovered to factory set.
► Press “ESC” return to the submenu

7.13 PASS Password setup

Menu structure

Function Setting

Select the password setting, “PASS” menu
► Press “SET” button, “PWDN 0000” displays on the
screen, to enter the new password
► Press “SET” button again, the first digital blinks
► Press “▲/▼”, to enter the correct digital, repeats same process to enter the second, the third and the forth digital.
► Press “SET” button, “PWDG  0000” displays on the screen, to enter the new password again, after confirm the new password, “ OK” displays on the screen, it indicates the new password setting successfully.

Note: If the password is forgot, it is impossible to recover, but you can recover the password to the factory set, then you can reedit a password like above descript steps, doing like following to recover to factory set.
► Switch-off the power to controller
► Hold down “ESC” button
► Reconnect the power supply, when beeper sounds 3 di….., and then release “ESC” button, Controller recovers to the factory set password (factory set password is 0000),

7.14M.H Manual heating

Function Description:
It is possible to trigger back-up heating manually with this controller to heat tank. When tank temperature is lower than the set point of the switch-on temperature, manual heating function is in standby, when you press the manual heating button, heating will start, and it works until tank temperature reaches to the set point.

Activate/deactivate this function:
► Press “M.H” button, temperature “60°C” blinks on the screen
► Press “▲/▼”, to adjust the desired temperature, adjustable range 10°C~80°C, factory set is 60°C
► Press “M.H” or “ESC” or waiting for 20 seconds to trigger the manual heating, then manual sign  lighted on the screen, and the heating sign  blinks the screen
► Press “M.H” again, switch-off manual heating.

Note: Manual heating is not a continuous heating process, it is triggered manually, and when the temperature reaches to the set point, the heating process is stopped. And manual heating function is stopped automatically.

7.15 Holiday function
The holiday function is used for operating the system when no water consumption is
expected, e. g. during a holiday absence. This function cools down the system in order to reduce the thermal load.

2 cooling functions are available: tank cooling (OSTC) and tank heat transfer (OHDP).

**Note:** Controller is designed to run tank heat transfer (OHDP) function priority, when tank heat transfer (OHDP) function is deactivated, then tank cooling function (OHTC) runs automatically in turn.

**Activate/deactivate this function:**
► Press “        ” button for 3 seconds, “HDAY 05” displays on the screen
► Press “▲/▼”, to adjust holiday's days, adjustable range 0-99 days
► Press “        ” again, holiday function is closed, sign “        ” closed.

**Note:** When you return from holiday, please deactivate this function in time.

### 8. Protection function

#### 8.1 Memory function during power failure
When power of controller is failed, and when power is switched-on again, controller will keep the parameters which set before power failure.

#### 8.2 Screen protection
When no any press on button for 5 minutes, screen protection is activated automatically, and then LED background lamp is switched-off. Through press any button to light LED lamp again.

#### 8.3 Trouble checking
The built-in controller is a qualified product, which is conceived for years of continuous trouble-free operation. If a problem occurs, the most of causes is from the peripheral components but no relation with controller itself. The following description of some well-known problems should help the installer and operator to isolate the problem, so that the system can be put into operation as quickly as possible and to avoid unnecessary cost. Of course, not all possible problems can be listed here. However, most of the normal problems encountered with the controller can be found in the list below, only return the controller to seller when you are absolutely sure that none of the problems listed below is responsible for the fault.
9. Quality Guarantee

Manufacturer provides following quality responsibilities to end-users: within the period of quality responsibilities, manufacturer will exclude the failure caused by production and material selection. A correct installation will not lead to failure. When a user takes incorrect handling way, incorrect installation, improper or crude handling, and wrong connection of Warm water outflow upwards.

The quality warranty expires within 18 months after the date of purchasing the controller.
